EDUCATION

Carnegie Mellon University

Pittsburgh, PA

B.S. in Computer Science and Statistics & Machine Learning

May 2029

- **Relevant Coursework:** Imperative Computation, Fundamentals of Programming and CS, Matrices and Linear Transformations, Integration and Approximation, Differential/Integral Calculus, Reasoning with Data, Physics I

EXPERIENCE

Software Developer

June 2026 – Present

ScottyLabs

Pittsburgh, PA

- Built CMU Housing, a dorm-comparison website used by ~5,000 CMU students
- Designed and built a reusable React/TypeScript “Share” dropdown supporting URL copy, SMS, email, and iframe embeds, expanding site distribution to 4 channels

PROJECTS

PackRight | *Python, FastAPI, React, TypeScript, Three.js, Gemini API*

September 2026

- Designed an end-to-end 3D suitcase-packing planner spanning GLB geometry ingestion, AI item enrichment, and deterministic optimization across 40+ backend and frontend files
- Integrated the Gemini API to infer item metadata from rendered previews under a strict JSON schema, while architecturally barring the AI from setting item dimensions, weight, or plan validity
- Developed a two-phase solver (exact/beam-search selection + rotation-aware 3D placement) and an independent validator that re-derives bounds, collisions, and support; verified by 95 passing tests

3D Chess Bot | *Java*

May 2026 – June 2026

- Engineered a Java chess engine implementing iterative-deepening minimax search with alpha-beta pruning, reaching 5-7 ply depth within a 5-second move limit
- Optimized search performance with MVV-LVA move ordering, killer-move and history heuristics, and time-boxed iterative deepening to guarantee a legal move every turn
- Reverse-engineered the game engine’s bytecode to uncover undocumented win conditions and designed a custom evaluation function (material, board control, king safety) to exploit them

Endless Strands | *JavaScript, jQuery, SEO*

August 2025 – Present

- Launched the organization’s website, its primary web presence for donor and volunteer acquisition
- Integrated Google Analytics (GA4) for site-wide event tracking and applied on-page SEO practices (XML sitemap, semantic HTML, meta descriptions), making organic search the site’s top traffic channel (45.6% of sessions) with a 12.3% average click-through rate on Google Search (vs. 2-5% industry benchmark)
- Built a GitHub Actions CI/CD pipeline that auto-deploys the site and blocks commits/PRs containing hardcoded credentials via detect-secrets scanning

HONORS

MIT/Jane Street Math Prize for Girls Qualifier (Top 3 Canadian Score)

October 2025

PhysicsBowl Division 2 Contestant (Top 5 score in team, helped place 1st in Canada)

June 2026

4x AIME Qualifier

2022 – 2026

TECHNICAL SKILLS

Languages: C/C++, Java, Python, TypeScript, JavaScript, HTML/CSS

Frameworks: React, FastAPI, Node.js, Wordpress

Developer Tools: Git, GitHub, GitHub Actions, GitHub Pages, Docker, Vite

Libraries: jQuery, NumPy, pandas, SciPy, Pydantic, Three.js, Matplotlib

Web, Data & APIs: Shopify, Google Analytics (GA4), SEO, Open Graph, SQLite, Gemini API
